

PVB SHAPING OR STRETCHING

For windscreen production

PURPOSE

PVB SHAPING OR STRETCHING prepares PVB interlayer sheets for the production of windscreens. It gives both commercial and economical benefits to the windscreen producer :

- increases the aesthetic and comfort values of top-shaded windscreens
- gives savings of 15-25 % with top-shaded PVB and 10 % with uniformly coloured PVB

APPLICATION

Clear, tinted and top-shaded PVB can be processed. The line is well adapted for shaping both refrigerated and interleaved PVB. It is equipped with automatic interleaf rolling-out system.

The machinery can be used for :

- shaping top-shaded or uniformly coloured PVB with the minimum radius of 2100 mm
- stretching PVB to optimal thickness within quality requirements
- cutting clear and tinted interlayer at any desired angle between 0-25°
- shaping, stretching and cutting machines can also be operated individually

PRODUCTION CAPACITY

SHAPING : The operating speed for shaper SMF 3 : 3 m/min, for SMF 6 : 6 m/min

CUTTING : Max. speed for FCM cutter is 6 m/min. When used as a part of the line the cutting machine is synchronised with the shaper or relaxation module.

SAVINGS

In optimal use, the line:

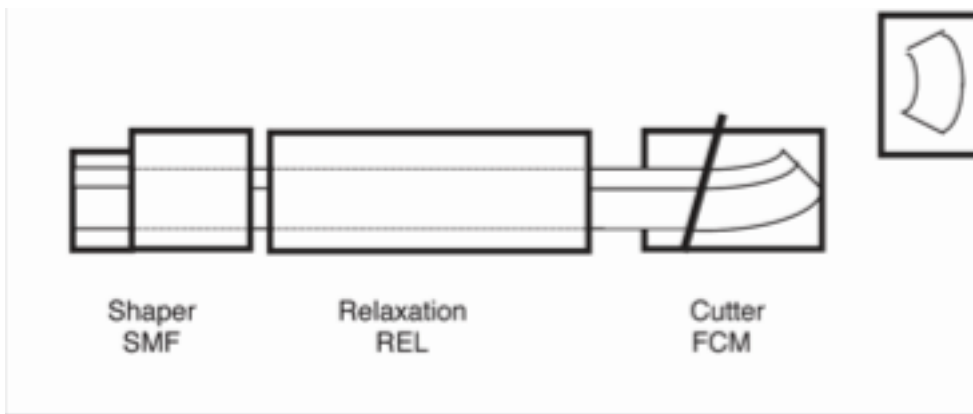

- minimises waste
- offers considerable savings by more efficient use of PVB
- decreases stock items

LAY-OUT AND AMBIENT CONDITIONS

The equipment should be installed in a dust-free area, preferably in clean room conditions.
The whole line, SMF+REL+FCM should be positioned in a room with a temperature of $20 \pm 2^\circ\text{C}$ and RH of 25-30 %.

LAY-OUT

Area required for basic version with automatic cutting : 4.5 m x 13 m x 3 m height.

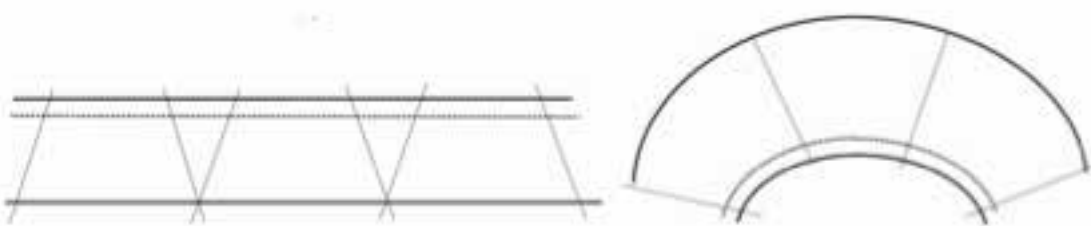

OPTIONS

According to the user's needs :

- separate cutting with drive, operation width 1250 - 1700 mm
- antistatic treatment of PVB
- manual stackers
- humidity measurement
